

Tag Cloud Zen Cart Module

Price: \$29.00

Product description:

Tag Cloud Zen Cart Module generates **Cloud of Tags**, based on Zen Cart product names, Zen Cart category names, most popular(purchased) products, most viewed products, products with most reviews etc.

Product tagging becomes really popular now, here are examples how largest retailers/sites are using **Tag Clouds**:

1. Amazon.com
2. news.com.com
3. ZDNet
4. Netscape
5. flickr.com
6. Technorati
7. Amazon Blog
8. Technology Evangelist
9. MSDN Channel9

And literally thousands of other sites!

A **tag cloud** (or **weighted list** in visual design) can be used as a visual depiction of content tags used on a web site. Often, more frequently used tags are depicted in a larger font or otherwise emphasized, while the displayed order is generally alphabetical. Thus both finding a tag by alphabet and by popularity is possible. Selecting a single tag within a tag cloud will generally lead to a collection of items that are associated with that tag.

It would be possible to represent weights using histograms. However, whereas histograms typically are used to represent less than 20 numerical values, tag clouds are used to represent the relative weights of 50, 100, or even 150 tags. - [Wikipedia](#)

Tag Cloud Zen Cart module features:

- very easy installation (just copy files and insert small piece of code where tag cloud will appear), step by step installation instruction included
